

Program A Pumpkin

1. Cut around the large black rectangle with the pumpkin on it and the two orange strips marked EYES & MOUTHS.
2. Cut out the grey squares and rectangles from the black rectangle to make the 'windows'.

If using a jam jar -

3. Attach the right side of the black rectangle to a jam jar.
4. Thread the EYES & MOUTHS strips into the EYES IN & MOUTHS IN windows on the right.
5. Gently pull across and slot them into EYES OUT & MOUTHS OUT slots on the left.
6. Attach the left side of the black rectangle to the jam jar.
7. Put a tea light into the jam jar (LED recommended).
8. Get programming! Moving the strips to different letters and numbers will give you different faces.!

If you are using a real candle remember that the glass will get hot so please be very careful and don't tip the jam jar (wax might spill).
